

# How To Use This Site For Great Results

This sheet explains the learning plan and directions on how to use this site to master fractions (all topics on fractions). This is highly recommended that you should limit your effort based on your grade level. This site is on fractions only, and have all the well explained lessons and fractions worksheets for students in any grade.

## *Suggested study plan is given below:*

- ♦ First of all, read the explanations given in lessons. For example; if you want to learn [adding fractions](#), go to adding fractions page of the site and look for lessons on adding fractions there, print these lessons to study them.
- ♦ Once you've got the concepts in the lessons, take a very careful and concentrated look at the solved examples in the lessons and it is highly recommended that you do the solved examples by yourself after you have understood them.

## **Show what you know**

- ♦ Practice the fractions worksheets once you are able to do solved examples on your own.
- ♦ Finally, solve all the problems given in worksheets on that section ( For example; [adding factions worksheets](#), if you working on adding fractions). Soon you will find that you've mastered the fractions, all of them.

*Best Of Luck In Your Fractions Learning*
