

# Equivalent Fractions Worksheet - 4

## Equivalent Fractions

There are three fractions in each problem and two of them are equivalent fractions. Your job is to circle the two equivalent fractions. First one is done as an example:

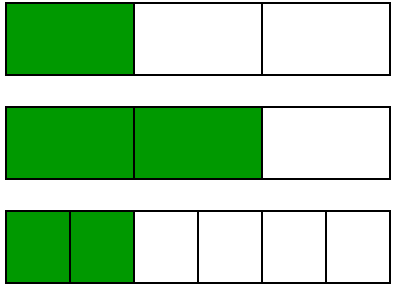

1)  Notice that first and third fractions have the same area shaded and in second fraction in the middle the area shaded is little bit more. Hence circle first and third fractions as they are equivalent.

$\frac{2}{3}$        $\frac{3}{5}$        $\frac{4}{6}$

2)   $\frac{2}{4}$

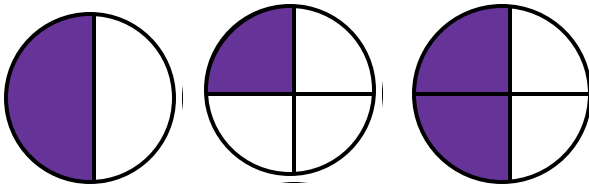

$\frac{1}{2}$

$\frac{2}{5}$

3)   $\frac{1}{3}$

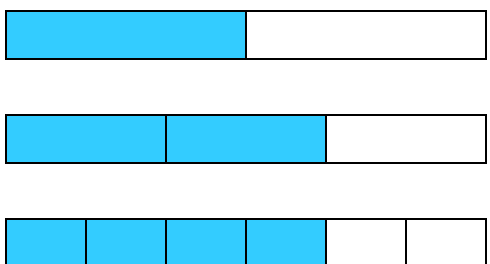

$\frac{2}{3}$

$\frac{2}{6}$

4)   $\frac{1}{2}$

$\frac{1}{4}$

$\frac{2}{4}$

5)   $\frac{1}{3}$

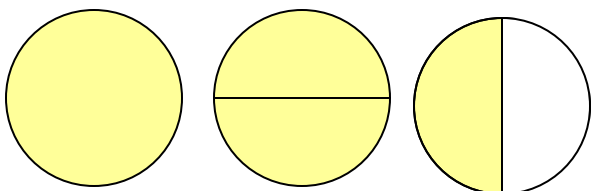

$\frac{2}{3}$

$\frac{4}{6}$

6)   $\frac{1}{4}$

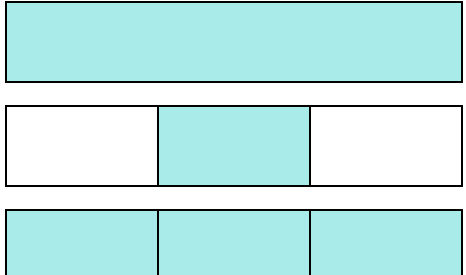

$\frac{2}{8}$

$\frac{1}{5}$

7)   $1$

$\frac{2}{2}$

$\frac{1}{2}$

8)   $1$

$\frac{1}{3}$

$\frac{3}{3}$

9) Finally you draw two equivalent fractions in the space below:
